

Systems and solutions for automation.

Metal Work Sverige

Metal Work Sverige AB was established in 1988 and today we are 14 competent employees who help and deliver customer-specific automation solutions for production operations for the entire Swedish industry.

At Metal Work Sweden, employees are our most important resource. Our skilled advisors have many years of experience and offer technical solution proposals based on the latest knowledge in pneumatics and automation. In close collaboration with you, based on your production, automation solutions are composed that contribute to securing fast and more efficient production processes for you as a customer. With our own production facility, we offer fast delivery times on all our products.

Engineering Division

Services

In recent years, Metal Work Danmark has increased its sales thanks to the constant growth of our technical department, a department created to offer all kinds of integrated technical solutions with a single goal: to become part of the technical department of our OEM-customers, achieve a synergy in the collaboration and achieve common goals.

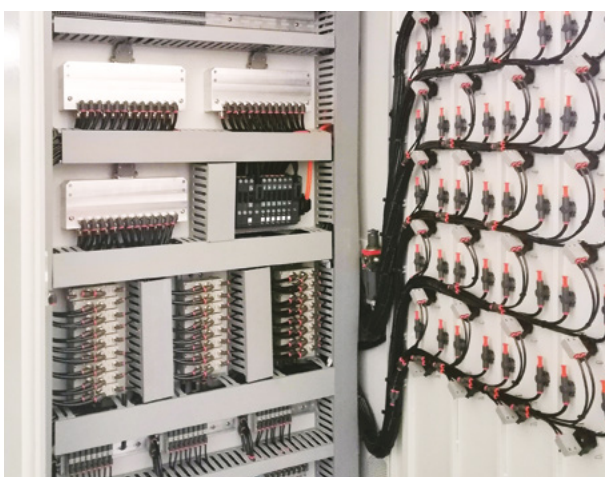

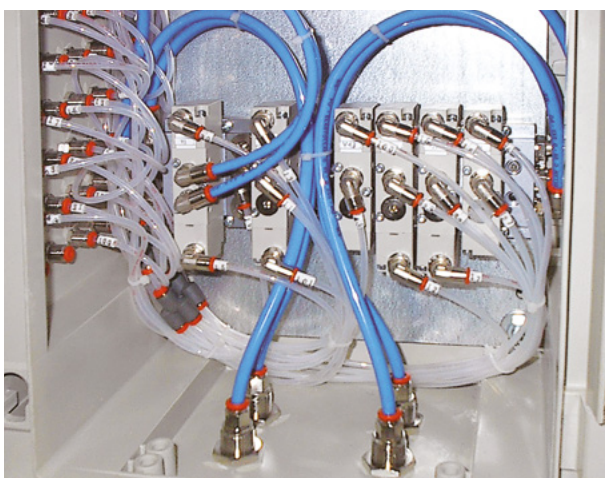

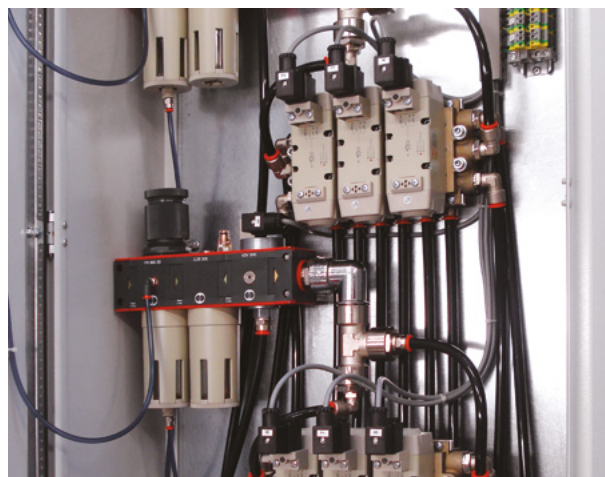

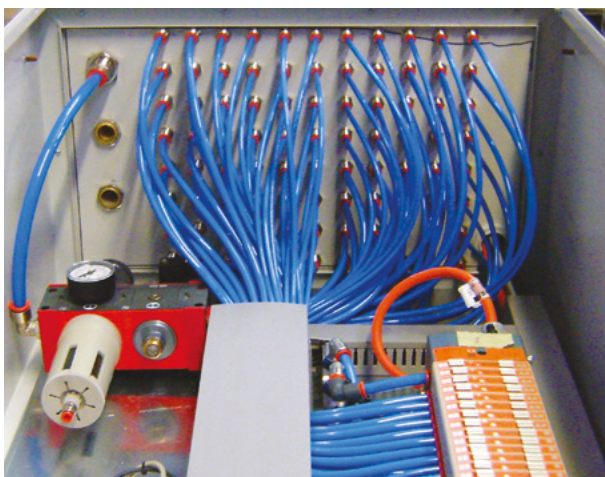

For this reason we offer the following services:

- Project study;
- Detailed presentation of the technical offer;
- Mounting;
- Complete technical documentation upon product delivery: certificates, PPI, complete 3D drawings, maintenance manual, etc.

Most common assemblies

- Electro-pneumatic cabinets, turnkey delivery;
- Integrated cylinders with valves and accessories;
- Complete groups of solenoid valves;
- Integration of buses to electric valves (Can-open, Profibus-DP, Interbus-S, AS-i, Device-net);
- Special filter groups;
- Special assembly
- Development of customized cylinders according to the client's drawing.

Some of the many products made.

Metal Work SpA.

A global company.

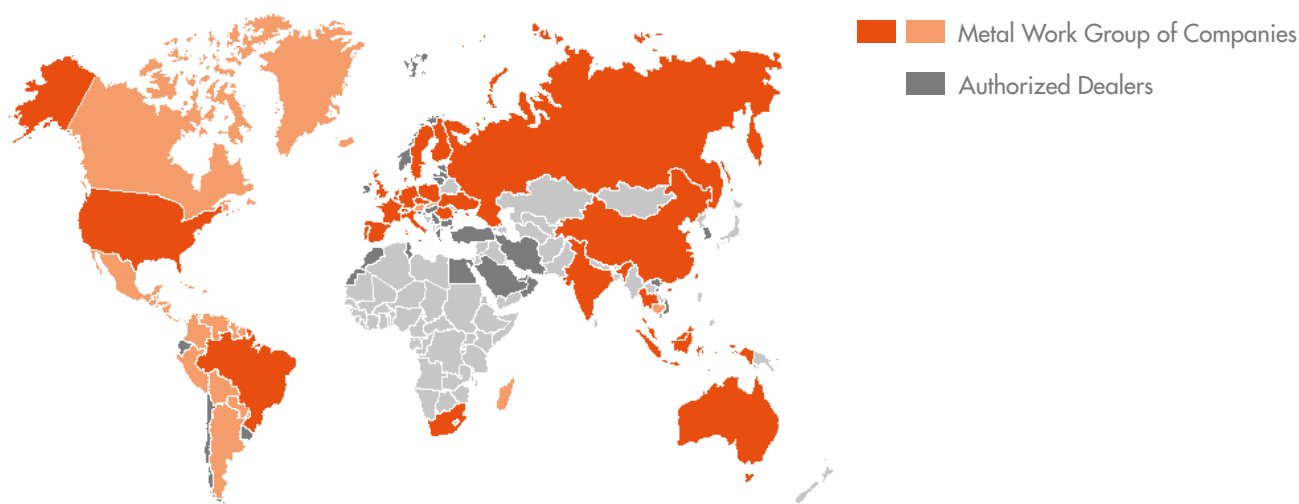

Metal Work is an Italian company specialised in the production of pneumatic components for automation systems. Set up in 1967, Metal Work started out as small workshop manufacturing push-in fittings for compressed air systems. Since then, the company has gradually expanded its structure and production range to become a market leader in pneumatic components for automation systems.

We currently market five different product ranges: actuators, valves, FRL units, fittings and handling components, all of which appear in our 1700 pages catalogue.

The main production site is located in Concesio, near Brescia, with a total workforce of over 500 people and a further 800 employees in the Italian and worldwide sales network.

Metal Work obtained ISO 9001 quality certification in 1992, which was followed by the environmental certification under ISO 14001 in 2000. In order to guarantee an occupational health and safety management system, in 2007 Metal Work applied to them the British standard OHSAS 18001, and then moved on to ISO 45001 in 2019. All these certifications have been issued by Dakks-accredited German certification body DEKRA.

Product distribution and technical assistance are handled by 50 subsidiaries in Italy and abroad: these are in daily contact with the market and provide a comprehensive before/after-sales service. Product quality and an efficient sales organisation are the cornerstones on which Metal Work has based its reputation. These qualities enable the company to meet all possible requirements in terms of pneumatic automation.
